

Slimming + Rejuvenating

How does it work?

Zemits Abigon Pro is a body contouring treatment that uses advanced technologies to target and eliminate stubborn fat cells in problem areas. The treatment works by applying focused electromagnetic energy to the treatment area, causing the fat cells to heat up and break down. Once the fat cells are broken down, they are naturally eliminated from the body through the lymphatic system.

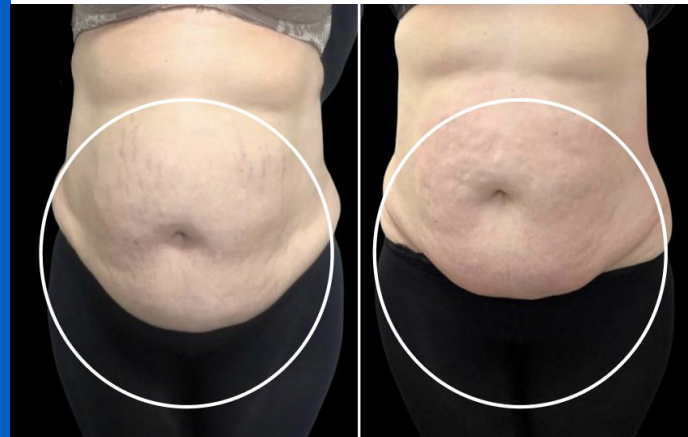

In addition to slimming and toning the body, Zemits Abigon Pro also helps to rejuvenate and tighten the skin. The treatment stimulates collagen production, which improves skin elasticity and texture, resulting in a more youthful appearance.

Overall, Zemits Abigon Pro is a safe and effective way to slim and rejuvenate the body, helping patients achieve their desired body shape and youthful appearance without surgery or downtime.

Don't settle for just one benefit - experience the combined benefits of slimming and rejuvenating with our innovative treatments!

Is it right for me?

Cavitation and RF skin tightening are non-invasive body contouring treatments that can be used to reduce body fat and tighten loose skin, respectively. Cavitation is typically recommended for individuals with stubborn fat pockets that are resistant to diet and exercise. However, it may not be suitable for someone who is significantly overweight or obese, as it is not a weight loss solution. Radiofrequency, on the other hand, is often recommended for individuals who have loose, sagging skin on the face, neck, or body. It is also used to reduce the appearance of fine lines and wrinkles. As with any cosmetic procedure, it is essential to consult with a qualified practitioner to determine if you are a suitable candidate for cavitation or RF skin tightening.

Factors affecting your candidacy include your health, medical history, and specific cosmetic goals.

What can I expect?

The procedure is painless and non-invasive, with no downtime required. Patients can return to their normal activities immediately after the treatment. Results can typically be seen after just one session, although multiple sessions may be recommended for optimal results.

- 1. Fat reduction:** Zemits Abigon Pro treatments can help break down and eliminate fat cells in the targeted areas of the body, decreasing the circumference and volume of the treated area.
- 2. Skin tightening:** The radiofrequency technology used in Zemits Abigon Pro treatments can stimulate collagen production, which can help tighten and firm the skin in the treated area.
- 3. Improved skin texture:** The vacuum therapy used in Zemits Abigon Pro treatments can help improve blood flow and lymphatic drainage in the treated area, resulting in smoother, more even skin texture.
- 4. Cellulite reduction:** Zemits Abigon Pro treatments can help break down the fibrous bands that cause cellulite, reducing the appearance of dimpled skin.
